PERMISSIONS

PERMISSION	STATUS	INFO	DESCRIPTION
android.permission.INTERNET	dangerous	full Internet access	Allows an application to create network sockets.
android.permission.ACCESS_WIFI_STATE	normal	view Wi-Fi status	Allows an application to view the information about the status of Wi-Fi.
android.permission.ACCESS_NETWORK_STATE	normal	view network status	Allows an application to view the status of all networks.

PERMISSION	STATUS	INFO	DESCRIPTION
android.permission.RECEIVE_BOOT_COMPLETED	normal	automatically start at boot	Allows an application to start itself as soon as the system has finished booting. This can make it take longer to start the phone and allow the application to slow down the overall phone by always running.
android.permission.WRITE_EXTERNAL_STORAGE	dangerous	read/modify/delete SD card contents	Allows an application to write to the SD card.
android.permission.CAMERA	dangerous	take pictures and videos	Allows application to take pictures and videos with the camera. This allows the application to collect images that the camera is seeing at any time.
android.permission.RECORD_AUDIO	dangerous	record audio	Allows application to access the audio record path.
android.permission.ACCESS_FINE_LOCATION	dangerous	fine (GPS) location	Access fine location sources, such as the Global Positioning System on the phone, where available. Malicious applications can use this to determine where you are and may consume additional battery power.
com.android.launcher.permission.INSTALL_SHORTCUT	normal		Allows an application to install a shortcut in Launcher.
android.permission.INSTALL_SHORTCUT	normal		Allows an application to install a shortcut in Launcher.
com.google.android.launcher.permission.READ_SETTINGS	dangerous	Unknown permission from android reference	Unknown permission from android reference
com.google.android.launcher.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
android.permission.WAKE_LOCK	dangerous	prevent phone from sleeping	Allows an application to prevent the phone from going to sleep.

APKiD ANALYSIS

APKiD not enabled.

FILE

BROWSABLE ACTIVITIES

ACTIVITY INTENT

MANIFEST ANALYSIS

ISSUE	SEVERITY	DESCRIPTION
Application Data can be Backed up [android:allowBackup=true]	medium	This flag allows anyone to backup your application data via adb. It allows users who have enabled USB debugging to copy application data off of the device.

ISSUE	SEVERITY	DESCRIPTION
Launch Mode of Activity (com.ideal.camera.photo.edit.IdealHomeActivity) is not standard.	high	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
TaskAffinity is set for Activity (com.ideal.camera.photo.edit.open.IdealCameraSplashActivity)	high	If taskAffinity is set, then other application could read the Intents sent to Activities belonging to another task. Always use the default setting keeping the affinity as the package name in order to prevent sensitive information inside sent or received Intents from being read by another application.
Activity (com.ideal.camera.photo.edit.open.IdealCameraSplashActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Broadcast Receiver (com.ideal.camera.photo.edit.open.IdealCameraReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Service (com.ideal.camera.photo.edit.job.IdealJobService) is Protected by a permission, but the protection level of the permission should be checked. **Permission:** android.permission.BIND_JOB_SERVICE [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
Activity (com.ideal.camera.photo.edit.open.IdealMainActivity) is not Protected. An intent-filter exists.	high	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.
Broadcast Receiver (com.ideal.camera.photo.edit.open.MyWidgetProvider) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Broadcast Receiver (com.ideal.camera.photo.edit.open.MyWidgetProviderTakePhoto) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Content Provider (com.facebook.FacebookContentProvider) is not Protected. [android:exported=true]	high	A Content Provider is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Service (com.jb.zcamera.application.PersistentProcessService) is not Protected. [android:exported=true]	high	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
Broadcast Receiver (com.jiubang.commerce.daemon.BootCompleteReceiver) is not Protected. An intent-filter exists.	high	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.
Dailer Code: Found [android:scheme="android_secret_code"]	high	A secret code was found in the manifest. These codes, when entered into the dialer grant access to hidden content that may contain sensitive information.
High Intent Priority (999) [android:priority]	medium	By setting an intent priority higher than another intent, the app effectively overrides other requests.
High Intent Priority (99999) [android:priority]	medium	By setting an intent priority higher than another intent, the app effectively overrides other requests.
High Intent Priority (99999) [android:priority]	medium	By setting an intent priority higher than another intent, the app effectively overrides other requests.

"whats_new_text" : " [This dialog is shown when Ideal Camera is updated. You can disable it under Settings/On screen GUI/Show What's New dialog.] v1.44: New photo modes (if Camera2 API is enabled): NR noise reduction (only supported on high end devices), and focus bracketing. New Ghost image option, to overlap the last photo or a selected image. New option to show audio level meter when recording video. New option to record video with flat (log) profile. (Camera2 API only.) New option to choose metres or feet for photo stamp. Improved behaviour of seekbars for manual ISO, shutter speed, white balance. If an option that requires compass direction is set, Ideal Camera will warn you if the device's compass is unreliable. Other improvements and bug fixes. "
